                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                503
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sasaki, National Institute of Agrobiological Resources, Rice Genome Research Program; Kannondai 2-1-2, Tsukuba, Ibaraki 305-8602, Japan (E-mail:tsasaki@abr.affrc.go.jp, URL:http://www.dna.affrc.go.jp:82/, Tel:81-298-38-7441, Fax:81-298-38-7468)
The orientation of the sequence is from T7 to SP6 of the PAC clone. Genes were predicted from the integrated results of the following:GENSCANI.0, BLASTNZ.0, BLASTNZ.0 as well as SplicePredictor (October 1998 version). The genomic sequence was searched against the non-redundant database NRP (PIR, SWISSPROT, GENPEPP, PDB) from MAFF DNA bank and the cDNA sequence database at RGP. Protein similarities of the cording regions were searched against NRP with BLASTP2.0. ESTs represent the identified cDNA sequences using BLASTN 2.0 with the corresponding DDBJ accession
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            tcagtttggatctgtacaacaatcatcaccgggaaaatcccatcttctttgggaaaat 442
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               caattccag

Ps Claim 27; Pages 91-95; 123pp; English.

Ct The sequence is that encoding SER, a putative receptor kinase.

Ct It may be used as part of a method of producing apomictic seeds

cc comprising: (a) transforming plant material with a nucleotide

sequence encoding a protein which in active form in a cell or

cell membrane renders the cell embryogenic; (b) regenerating

the transformed material into plants or carpel-containing

plant parts; and (c) expressing the sequence in the vicinity

of the embryo sac. The apomictic seeds and embryos thus produced

can be developed into plant progeny. This is useful in plant

breeding programs. Controllable and reproducible apomixis provides

cmany advantages in plant improvement and cultivar development in

the case that sexual plants are available as crosses with the

propagated hybrids and could shorten and simplify the breeding

process so that selfing and progeny testing to produce and/or

stabilise a desirable gene combination could be eliminated.

Apomixis allows plant breeders to develop cultivars with

specific stable traits for such characteristics as height,

seed and forage quality and maturity.

                                                                                                                                          Production of apomictic seeds - useful in plant breeding Claim 21; Pages 47-51; 123pp; English.

The sequence is that encoding SERK, a putative receptor kinase. It may be used as part of a method of producing apomictic seeds comprising: (a) transforming plant material with a nucleotide sequence encoding a protein which in active form in a cell or cell membrane renders the cell embryogenic; (b) regenerating the transformed material into plants or carpel-containing plant parts; and (c) expressing the sequence in the vicinity of the embryo sac. The apomictic seeds and embryos thus produced can be developed into plant progeny. This is useful in plant treading programs. Controllable and reproducible apomixis provides many advantages in plant improvement and cultivar development in the case that sexual plants are available as crosses with the case that sexual plants are available as crosses with the apomictic plant. Apomixis provides for true-breeding seed process so that selfing and progeny testing to produce and/or stabilise a desirable gene combination could be eliminated. Apomixis allows plant breeders to develop cultivars with seed and forage quality and maturity.

The present sequence encodes an Arabidopsis thaliana plant morphogenesis regulatory protein (MRP), which can be used to yield a plant with, e.g. short stems or altered inflorescence. The MRP catts on a plant at a specific site for a specific period, and can therefore be used to regulate extraneous gene expression in a plant. The MRP's cDNA or genomic DNA can be used to transform a plant to increase its MRP expression, and therefore control the form (particularly stem length) of the plant.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
     Production of apomictic seeds - useful in plant breeding
Sclaim 26; Pages 64-67; 123pp; English.
The sequence is that encoding SERK, a putative receptor kinase.
Claim 2be used as part of a method of producing apomictic seeds
Cc comprising: (a) transforming plant material with a nucleotide
cc cell membrane renders the cell embryogenic; (b) regenerating
Cc cell membrane renders the cell embryogenic; (b) regenerating
Cc the transformed material into plants or carpel-containing
Cc the transformed material into plants or carpel-containing
Cc plant parts; and (c) expressing the sequence in the vicinity
Cc of the embryo sac The apomictic seeds and embryos thus produced
Cc can be developed into plant progeny. This is useful in plant
Cc the case that sexual plants are available as crosses with the
cc apomictic plant. Apomixis provides for true-breeding, seed
Cc apomictic plant. Apomixis provides for true-breeding, seed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  V06585 stand

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              process so that selfing and progeny testing to produce and/or stabilise a desirable gene combination could be eliminated. Apomixis allows plant breeders to develop cultivars with specific stable traits for such characteristics as height, seed and forage quality and maturity.

Sequence 4081 BP; 1120 A; 770 C; 785 G; 1406 T;
          T06307 is a tomato pathogen resisitance gene Cf-2.2 partial cDNA clone. In a new method this gene is expressed highly in genetic constructs which may be used to impart a broad range of pathogen resistance, by induction of variegation, to transgenic plants (or parts or propagules of plants) containing such constructs. Cf-2.2 imparts resistance to the disease caused by the leaf mould fungal pathogen Cladosporium fulvum. C.fulvum contains avirulence (Avr) genes that confer recognition by plants containing Cf-genes, leading to the activation of host defence mechanisms to attack the disease.
                                                                                                                                                                                                                                                                                                                                  Lycopersicon esculentum.

                                               Increasing plant pathogen resistance by induction of variegation—may lead to acquired resistance to a broad range of pathogens.

Claim 9; Page 80-83; 131pp; English.

106306 is the tomato pathogen resistance gene Cf-2.1. In a new method this gene is expressed highly in genetic constructs which may be used to impart a broad range of pathogen resistance, by induction of variegation, to transgenic plants (or parts or propagules of plants) containing such constructs. Cf-2.1 imparts resistance to the disease caused by the leaf mould fungal pathogen Cladosporium fulum.

C. fulvum contains avirulence (Avr) genes that confer recognition by plants containing Cf-genes, leading to the activation of host defence mechanisms to attack the disease.

                                                                                     Disclosure; Fig 5, 75pp; English.

This sequence is a clone of the polynucleotide of the invention, which is able to confer pathogen resistance on a plant. The polynucleotide of the invention is one of two tomato CF-5 gene variants, which offer cresistance against the pathogen cladosporium fulvum-5. Transgenic plants can be produced by incorporating the gene into plant cells and cregenerating plants from the cells; asexually or sexually produced conferring can also be subsequently produced. Expression of the gene in confer pathogen resistance on a plant e.g. to tomato leaf complementary to the gene or fragments of it, are useful in anti-sense conferring pathogen resistance on plants acids/polynucleotides are useful as hybridisation probes to identify other genes/fragments of conferring pathogen resistance on plants e.g. Phytophthora resistance in contained to the sense of this class.

Production of apomictic seeds - useful in plant breeding Claim 21; Pages 40-46; 123pp; Engilsh.

The sequence is that encoding SERK, a putative receptor kinase. It may be used as part of a method of producing apomictic seeds comprising: (a) transforming plant material with a nucleotide sequence encoding a protein which in active form in a cell or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş
        plant parts; and (c) expressing the sequence in the vicinity of the embryo sac. The apomictic seeds and embryos thus produced can be developed into plant progeny. This is useful in plant breeding programs. Controllable and reproducible apomixis provides many advantages in plant improvement and cultivar development in the case that sexual plants are available as crosses with the apomictic plant. Apomixis provides for true-breeding, seed propagated hybrids and could shorten and simplify the breeding process so that selfing and progeny testing to produce and/or stabilise a desirable gene combination could be eliminated.

Apomixis allows plant breeders to develop cultivars with seed and forage quality and maturity.

Seed and forage quality and maturity.

PT Tomato gene Cf-5, confers resistance to Cladosporium fulvum - useful production of transgenic plants resistant to pathogens e.g.

PT tomato leaf mould C. fulvum in tomatoes

PS Claim 3; Fig 1a; 75pp; English.

PS Claim 3; Fig 1a; 75pp; English.

CC This sequence is an example of the polynucleotide of the invention, and cis able to confer pathogen resistance on a plant. It is one of two tomato CC F-5 gene variants, which offer resistance against the pathogen CC cladosporium fulvum-5. Transgenic plants can be produced by incorporating CC the gene into plant cells and regenerating plants from the cells; CC asexually or sexually produced offspring can also be subsequently produced. Expression of the gene in plant cells can confer pathogen coligonucleotides with sequences complementary to the gene or fragments CC of it, are useful in anti-sense techniques to reduce gene expression. The cucleic acids/polynucleotides are useful as hybridisation probes to identify other genes/fragments conferring pathogen resistance on plants ce.g. Phytophthora resistance in potatoes. Homologies between Cf-5 and CC of any be used to identify further resistance genes of this class.
